TECHNICAL SKILLS

- Languages: Python, SQL
- Frameworks: Flask, FastAPI
- Databases: MySQL, PostgreSQL
- Tools & Technologies: Docker, Git , Power BI , Excel
- Core Concepts: REST API , Database Design, Authentication (JWT), Transactions (ACID), Backend Architecture.

LANGUAGES

- English - (Fluent)
- Hindi - (Native)

EDUCATION

- Master of Computer Applications (MCA)
- IGNOU | 2023 - Present
- Bachelor of Arts (B.A)
- IGNOU | 2018 - 2022

CERTIFICATIONS

- META - LLM For Young Developers
- Microsoft - AI Skills Passport

PROFESSIONAL SUMMARY

Backend Developer with hands-on experience building and deploying REST APIs using FastAPI and Flask. Skilled in Docker, PostgreSQL, MySQL, authentication, transaction management, and scalable backend architecture. Experienced in solving real-world deployment and database consistency challenges.

PROJECTS

BANKING SYSTEM API | PYTHON, FASTAPI, MYSQL

- Built a transaction-safe banking API supporting deposits, withdrawals, and account management.
- Implemented ACID-compliant transaction handling with rollback support.
- Designed relational database schema with constraints and validation.
- Developed REST APIs for transaction history and account operations.
- Handled concurrent transaction scenarios to maintain data consistency.
- Added transaction logging for auditability and debugging.

INVENTORY MANAGEMENT SYSTEM (FULL-STACK, DEPLOYED) | PYTHON, FLASK, DOCKER, POSTGRESQL

- Built and deployed a full-stack inventory management system with authentication and stock tracking.
- Containerized application and database services using Docker.
- Implemented JWT-based authentication and user-level authorization.
- Migrated database from MySQL (development) to PostgreSQL (production).
- Resolved deployment issues related to container networking and service configuration.
- Integrated frontend with backend APIs for seamless client-server communication.
- Ensured transactional data integrity during concurrent operations.
- Designed modular backend architecture using routes, services, and database layers.
